### What is SECCURA® automatic gas supply for tanks?

SECCURA® automatic gas supply for tanks is AGA's service for the management of your liquid gas supply. Through remote monitoring of the tank level at your site, AGA automatically delivers the required gas with no need for you to regularly check the level and order new supplies.

### Is the service the right solution for me?

SECCURA® automatic gas supply for tanks is the right solution for you if you want to focus on your core business while ensuring that you always have the amount of gas you need. If you have one or more liquid tanks installed, AGA can release you of the burden of controlling the tank level and ordering gas. We can manage the liquid gas supply for you. Via telemetry, we automatically measure the tank level and schedule new deliveries according to your demand.

### What are the benefits for me?

- **Increased reliability**
  - Confidence that the gas level is being monitored and new deliveries are being scheduled according to your demand
- **Reduced risk of production disturbance**
  - Ensured continuous production by avoiding unexpected gas shortage
- **Reduced costs**
  - No need to have employees in charge of monitoring and ordering gas

### How does it work?

SECCURA® automatic gas supply for tanks consists of the following steps:

1. A telemetry monitoring unit continuously reads the liquid gas level. When the tank level falls below a predetermined limit, a signal is sent to AGA.
2. AGA schedules the next delivery.
3. New gas arrives at your site within a prespecified time frame.
4. The liquid tank is filled by a trained AGA driver.

### What is needed to start using the service?

All you need to do is to contact your local sales representative and subscribe to SECCURA® automatic gas supply for tanks. Once you have signed up for the service, AGA will install the required surveillance unit at the gas tank and start managing the gas supply. Once this startup process is complete, no further activity is required from you as AGA will monitor the consumption and automatically schedule the deliveries of gas to your liquid tank.
